

GREEN TRANSITION FOR VET

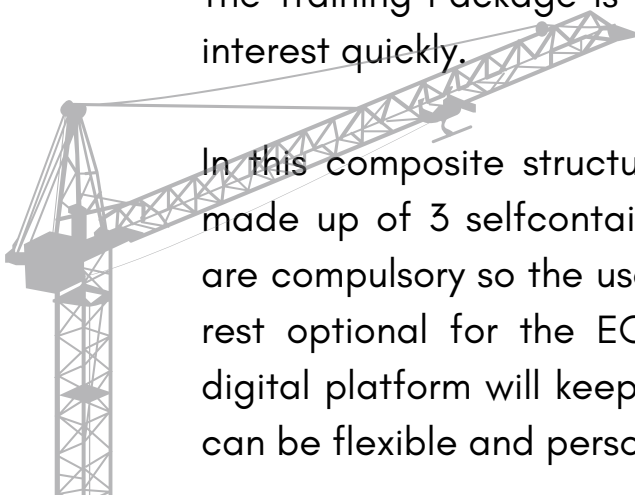

The GreenVET Training Package is now fully prepared to be digitized, offering an innovative and comprehensive approach to developing green skills for employees. This forward-thinking initiative consists of four modules, each designed to engage participants and cultivate the essential competencies needed to thrive in sustainable work environments.

Each module is composed of 3 units, each covering a specific area of the subject, including topics. A suggested overall structure for each module include 1-3 topics on introductory and general concepts related to each thematic subject aligned with the EQF6, followed by 1-2 theme-specific topics that will upgrade the knowledge of the user to EQF7 for those who will complete it. At the end of every unit, there are gamification activities to seal the knowledge that the user gained.

The units in each module have an approximate duration of 2.5 hours each (every topic ~30 minutes). The total duration of the Training Package will be approaching 30 hours, 7.5 hours per thematic subject. The Training Package is not very extended as the users will lose their interest quickly.

In this composite structure, the module designed by each partner is made up of 3 self-contained units divided into topics, some of which are compulsory so the user will achieve the EQF6 certificate, while the rest optional for the EQF7, depending on the user's intention. The digital platform will keep track of every user's progress so the training can be flexible and personal time-based.
